DETAILED ACTION***Election/Restrictions***

Applicant's election with traverse of group I comprising claims 29 – 33 in the reply filed on 12/22/2006 is acknowledged. The traversal is on the ground(s) that the two inventions are not separate and distinct. This is not found persuasive because, as discussed in the restriction requirement, the different inventions do incorporate different device components. Each of the inventions are classified in separate classifications and the examination process would therefore require a different field of search. Clearly different searches and patentability determination issues are involved in the examination of each invention. Claims 34 – 37 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 29 – 33 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 29 – 33 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are:

Art Unit: 1743

Regarding claim 29, it is unclear as to how each of the device components (e.g., the pump cell, the reference cell, sensor chamber, heating device, ground plane electrode, etc.) are arranged and connected with one another to provide a functioning device. For example, how is the heating device and gas sensing arrangement comprising the pump cell, a reference cell and sensor chamber structurally arranged with respect to one another? Is the heating device in contact with the sensor chamber? In claims drawn to an apparatus statutory class of invention, the structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device (See MPEP § 2172.01). Furthermore, the applicant's specification indicates that the isolation layer is preferable and can be considered critical to the functioning of the claimed device (see paragraphs 15 and 18). A feature that is taught as critical in the specification should be recited in the base claim (see MPEP § 2164.08c).

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 1743

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
